BACHELOR OF BUSINESS ADMINISTRATION, INDIVIDUALIZED CONCENTRATION

The purpose of the individualized concentration is to assist Bachelor of Business Administration students who have a clear career objective that falls outside of the nine standard B.B.A. concentrations (http://gwsbwebsite.com/undergraduate/bba). The career objectives of most B.B.A. students can easily be met by one of the standard concentrations, in which case pursuing an individualized program of study is not recommended.

REQUIREMENTS

Program of study

The program of study for the B.B.A. individualized concentration varies greatly depending on the individual student’s objectives. Past individualized concentrations pursued include entrepreneurship and/or small business management, health administration, human resource management, performing arts management, real estate development, strategic management, and supply chain management.

Proposal and application process

As part of the application process, students must create a proposal that includes the following core requirements:

- five field courses
- one international field course

Students develop their full proposal based on extensive research and with the assistance of faculty members who focus in related fields. Complete criteria and application directions can be found in the Individualized Field Application Packet (http://business.gwu.edu/wp-content/uploads/2014/02/Individualized_Field_Information_and_Application_packet_FA14.pdf).

Two key factors to be aware of:

- GWSB students must have a 3.2 or higher cumulative GPA in order to submit an Individualized concentration proposal.
- Proposals must be submitted before the start of senior year.

Important Note

The Individualized concentration application process typically takes 10 to 12 weeks from initial research to receiving the faculty committee’s final decision; therefore, it is recommended that students start this process no later than spring of their junior year. Students are advised not to take proposed courses prior to approval of the individualized field.
