The School of Medicine and Health Sciences offers a dual bachelor of science in health sciences with a major in medical laboratory sciences and master of science in health sciences in the field of molecular diagnostic sciences. The program allows students to take 6 graduate credits as part of their undergraduate program, thereby decreasing the number of credits normally required for the master’s degree. All requirements for both degrees must be fulfilled.

Students interested in the dual degree program should confer with the department's graduate adviser early in their junior year. Visit the program website for additional information.
