The following are goals of this educational program:

- Provide the knowledge and skills necessary to implement a COPC program.

- Provide an analytical framework for evaluating community-based interventions using the principles and methods of COPC as a reference.

- Provide opportunities for COPC practice, especially within vulnerable communities.

- Create health and public health practitioners with skills necessary to excel in the following positions:
  - Clinic Quality Improvement Specialist (clinic setting)
  - Patient Centered Medical Home team leader (clinic setting)
  - Supervisor of patient care coordination (clinic or MCO setting)
  - Community health specialist (community, clinic or public health setting)
  - Health promotion specialist (community or clinic setting)
  - Supervisor of Community Health Worker program (community or clinic setting)
  - Community Health Research coordinator (academic, clinic or community setting)
  - Director of community clinic or community health organization (With dual health and MPH degree)

**Mission Statement**

The Community Oriented Primary Care (COPC) program at the Milken Institute School of Public Health offers master of public health (MPH) and graduate certificate programs designed to train health professionals and public health practitioners to implement and evaluate evidence-based interventions to improve community health, clinical care outcomes, and patient experience, while lowering health care costs and decreasing health disparities.

**COPC**

The COPC program trains future health care innovators in the methods of COPC which provide skills to conceptualize, implement, evaluate, and disseminate interventions that bridge public health and clinical medicine. COPC begins by teaching practitioners methods to fully understand the needs of communities, health care providers and policy makers. Concurrently, skills are developed to read and interpret literature to inform future intervention design. With this in-depth understanding, COPC practitioners learn to work with stakeholders to prioritize interventions that have a high likelihood of improving health outcomes and patient experience while lowering health care costs and decreasing health disparities. COPC practitioners learn to conduct in-depth assessments, which help to shape intervention design and serve as baseline data to evaluate intervention impact. Acquired Intervention skills include implementation of social marketing campaigns, advocacy campaigns, mobile health interventions, individual brief behavioral interventions, peer interventions, quality improvement projects using data from electronic health records, structural interventions to impact health behaviors, and health system innovations to improve the ability of community based organizations to educate, test, and link to care patients with preventable and chronic health conditions. Evaluation skills are acquired that include analysis of qualitative, quantitative, and cost data. Dissemination skills are acquired to take best practices to scale. Through experiential learning COPC practitioners develop the skills necessary to lead health improvement projects in community, health department, academic, and clinical settings.

**Goals**

The following are goals of this educational program:

- Provide the knowledge and skills necessary to implement a COPC program.

- Provide opportunities for COPC practice, especially within vulnerable communities.

- Create health and public health practitioners with skills necessary to excel in the following positions:
  - Clinic Quality Improvement Specialist (clinic setting)
  - Patient Centered Medical Home team leader (clinic setting)
  - Supervisor of patient care coordination (clinic or MCO setting)
  - Community health specialist (community, clinic or public health setting)
  - Health promotion specialist (community or clinic setting)
  - Supervisor of Community Health Worker program (community or clinic setting)
  - Community Health Research coordinator (academic, clinic or community setting)
  - Director of community clinic or community health organization (With dual health and MPH degree)

**Background**

COPC provides the bridge between clinical medicine and public health, in which the community is the focal point in the delivery of health care. It provides a conceptual and methodological framework to rationalize, organize, and adapt available resources to the delivery of health services. The methods are essential to the organized delivery of health care in community based practices, organizations engaged in managed care, and responsive governmental health systems.

The basic concepts of COPC were initially implemented in South Africa during the early 1940’s by Sidney and Emily Kark with the creation of community health centers. These centers promoted a reorientation of health services at the community level through a unique linkage between individual clinical care and public health. They served as a laboratory for teaching and training health professionals.

Since that time, COPC has been taught and practiced in a number of settings around the world. Significantly, it has been an important element in the Community Health Center movement, the Indian Health Service, and a number of urban health departments in the United States as well as a variety of public health and primary care systems around the world. Developments in computer-based information management, mobile health, geographic information systems, and qualitative information gathering techniques have proved important assets to COPC practice.

**The Concept of COPC**

The essence of COPC is the planning and delivery of health care to a defined community in response to the defined needs of that community. To do this successfully requires the planned integration of the classical public health roles
of health promotion and disease prevention at population levels with the delivery of primary health care, which focuses on the clinical treatment of disease and its sequelae. COPC recognizes that, in line with the World Health Organization definition of health as being far more than the absence of disease, a clinical practice should be responsive to the broad health needs of the community and should be flexible enough to respond to changes in those needs. COPC can be defined as a continuous process by which primary care is provided to a defined community on the basis of its assessed health needs through the planned integration of public health with clinical practice. The COPC program curriculum teaches a six-step process as follows:

1. Community definition
2. Community characterization
3. Problem prioritization
4. Detailed assessment
5. Intervention
6. Evaluation

The overall curriculum is designed to give the learner the necessary public health tools to apply the principles of COPC in the context of community health practice and to be well educated in the disciplines of applied public health.

Specific admission requirements are shown on the Graduate Program Finder. [Link](http://www.gwu.edu/all-graduate-programs)

Visit the program website [Link](https://publichealth.gwu.edu/programs/community-oriented-primary-care-mph) for additional program information.

**REQUIREMENTS**

The following requirements must be fulfilled: 45 credits, including 15 credits in core courses, 6 credits in courses in the department, 14 credits in courses in the field, 6 credits in elective courses, and 4 credits in practicum and culminating experience courses.

**Courses in the department:**

- PUBH 6500 Planning and Implementing Health Promotion Programs
- PUBH 6501 Program Evaluation

**Courses in the field:**

- PUBH 6504 Social and Behavioral Science Research Methods
- PUBH 6510 Community-Oriented Primary Care Principles and Practice
- PUBH 6512 Community-Oriented Primary Care Policy and Issues
- PUBH 6514 Preventing Health Disparities
- PUBH 6513 Community Health Management
- PUBH 6516 Community Health Information Resources

**Elective course recommendations:**

- PUBH 6503 Introduction to Public Health Communication and Marketing
- PUBH 6534 Community-Based Participatory Research
- PUBH 6249 Use of Statistical Packages: Data Management and Data Analysis
- PUBH 6531 Health Promotion in Health Care Settings
- PUBH 6262 Introduction to Geographic Information Systems
- PUBH 6530 Qualitative Methods in Health Promotion
- PUBH 6532 Community Organization, Development, and Advocacy
- HSML 6204 Quality and Performance Improvement

**Other required courses:**

- PUBH 6014 Practicum
- PUBH 6015 Culminating Experience
Graduation Requirements
1. Graduate credit requirement: 45 graduate credits.
2. Course requirements: Successful completion of core and program-specific courses.
3. Minimum grade-point requirement: 3.0 (B average) overall grade-point average.
4. Time limit requirement: The degree must be completed within four years.
5. Transfer credit policy: Up to 12 graduate credits that have not been applied to a previous graduate degree may be transferred to the Master of Public Health program. External credits must have been earned from an accredited institution in the last three years with a minimum grade (or grade-point average) of B (3.0) or above. SPH graduate certificate students can transfer as many credits as meet program requirements—up to 18 credits—to the MPH degree. Graduate certificate students wishing to transfer to a degree program may apply to do so via the online change of concentration petition after completion of three or more courses and a cumulative GPA of 3.0 or above. A grade of B or above is required for a course to be eligible for transfer.
