MASTER OF SCIENCE IN THE FIELD OF BIOLOGICAL SCIENCES (STEM)

The Department of Biological Sciences offers a highly interactive master’s program. Students move easily among disciplines within the department and interact with other programs and institutions. Graduate research is generally in one of two areas: cell and molecular biology; and systematics, evolution, and ecology. Students in the program often take advantage of other researchers, faculty, and facilities at GW and elsewhere in the Washington area. These include the National Institutes of Health (NIH) and the Smithsonian Institution’s National Museum of Natural History.

The MS program is thesis-only, allowing students to pursue research in the laboratory of an advisor identified at the time of admission.*

A strong background in cell and molecular biology is essential for many competitive careers. Graduate students in this area conduct research on both well-studied model systems and non-model organisms, and often use comparative approaches. Common research themes among department faculty include cell signaling processes, and the genetic and cellular mechanisms governing virulence, behavior, immune responses, neurobiology, development, and the phenotypic expression of a variety of morphological traits. Students are trained in both experimental and comparative approaches and use a diverse array of modern research methods, ranging from precision imaging to gene editing to the assembly and analysis of genomes/proteomes/metabolomes.

Amid increasing concern about global change and biodiversity decline, expertise in systematics and ecology is more important than ever. GW’s Systematics, Evolution, and Ecology (SEE) program is one of the few in the world specializing in the principles and methods of phylogenetic analysis and comparative biology, putting the university at the forefront of biodiversity studies. Departmental research in evolution and ecology spans a wide array of taxa and study systems, including both vertebrate (amphibians, reptiles, fishes) and invertebrate (social and non-social insects, arachnids, oysters) animals, plants, fungi, and bacteria. In addition to systematics, students can join labs conducting research on behavioral, ecosystem, community, and population ecology as well as ecomorphology and biomechanics.

To complement their classroom education, students can get involved in ongoing field research at both terrestrial and aquatic field sites around the world. Recent graduate students have studied termites and wood decomposition in Australian rainforests, collected ants in Brazilian savannas, discovered new reptiles and amphibians in Sri Lanka, and unearthed rare dinosaur fossils in the Gobi Desert of China.

The department regularly supports graduate student attendance at graduate short courses offered around the US and abroad, including those available through our membership in the Organization for Tropical Studies as well as regularly offered short courses at Friday Harbor, Southwestern Research Station, and Woods Hole.

This is a STEM designated program.

Visit the program website (https://biology.columbian.gwu.edu/ms-biology/) for additional information.

*A non-thesis option may available, but only under special circumstance and only to continuing students with departmental approval.

ADMISSIONS

| Admission deadlines: | Fall - April 1 (February 1 for priority fellowship consideration) |
| Standardized test scores: | GRE general test recommended but not required (institutional code 5246). |
| Minimum scores for the program are: | - Academic IELTS: an overall band score of 7.0 with no individual score below 6.0; or |
| | - TOEFL: 600 on paper-based or 100 on Internet-based; or |
| | - PTE Academic: 68; |
| Prior academic records: | Transcripts are required from all colleges and universities attended, whether or not credit was earned, the program was completed, or the credit appears as transfer credit on another transcript. Unofficial transcripts from all colleges and universities attended must be uploaded to your online application. Official transcripts are required only of applicants who are offered admission. |
| Statement of purpose: | In an essay of 250 – 500 words, state your purpose in undertaking graduate study in your chosen field. Include your academic objectives, research interests, and career plans. Also discuss your related qualifications, including collegiate, professional, and community activities, and any other substantial accomplishments not already mentioned on the application. If you are applying for an assistantship or fellowship, you should also describe any teaching experience you have had. |
Applicants are required to establish correspondence with one or more potential research advisors in the Biological Sciences Department prior to submitting your application. You should mention these individuals in your statement of purpose, explain how your interests match their research program(s). Applicants who have not discussed with faculty their interests in the program are unlikely to be admitted.

International applicants only: Please follow this link - https://columbian.gwu.edu/international-graduate-applicants - to review the International Applicant Information carefully for details on required documents, earlier deadlines for applicants requiring an I-20 or DS-2019 from GW, and English language requirements.

Supporting documents not submitted online should be mailed to:
Columbian College of Arts and Sciences, Office of Graduate Studies
The George Washington University
801 22nd Street NW, Phillips Hall 107
Washington DC 20052

For additional information about the admissions process visit the Columbian College of Arts and Sciences Frequently Asked Questions (https://columbian.gwu.edu/graduate-admissions-faq/) page.

Hours: 9:00 am to 5:00 pm, Monday through Friday

REQUIREMENTS

The following requirements must be fulfilled:

The general requirements stated under Columbian College of Arts and Sciences, Graduate Programs (http://bulletin.gwu.edu/arts-sciences/#degreeregulationstext).

30 credits total, including one 3-credit required course, 6 credits in thesis, and 21 credits in elective courses. In addition, a research thesis must be completed and successfully defended.

Each student follows a personalized program of study, which maps out the courses to be taken throughout the degree. The program of study is prepared under the guidance of the student’s thesis advisor in the first semester. Courses are selected that are most appropriate for supporting and achieving the specific research-focused goals of the student’s MS thesis.
